Backset of Locks.

BACKSETS (Distance from edge of door to center of lock hub or keyhole). The proper method of measuring the backset of locks is as follows:

Front Locks—The backset is measured from the outside face of the front to the center of the hub.

Beveled Front Locks—The backset is measured from the center of the outside face of the front to the center of the hub.

Rabbeted Front Locks—The backset is measured from the outside face of the lower step of the front to the center of the hub.

Bevel Rabbeted Locks—The backset is measured from the outside face of the lower step of the front to the center of the hub.

Spacing.

SPACING is the distance between the center of the hub and the center of the top or round portion of the keyhole, except in Cylinder or Flat Key Locks, when it is measured from the center of the hub to the center of the keyhole.

Bevel of Doors.

Bevel of Doors—A beveled door is one having its front edge beveled, as shown: Fig. 1. The regular bevel usually adopted is ⅛ inch in 2¼ inches.

To obtain the bevel place a square on door as shown in cut. Give the distance from corner of square to the bevel, then give thickness of door.

Bevel of Mortise Lock Fronts.

Bevel of Mortise Lock Fronts—A mortise lock with beveled front, if regular, has its front set on an angle equal to ⅛ inch in 2¼ inches. All other bevels are irregular or special.

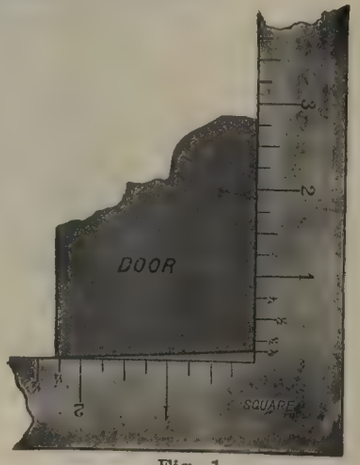

Fig. 1.
Door Beveled ⅛ in. in 2¼ in.

Hand of Locks.

This Door takes a **Right-Hand Lock.** This Door takes a **Left-Hand Lock.**

This Door takes a Right-Hand Reverse-Bevel Lock. **This Door takes a Left-Hand Reverse-Bevel Lock.**

"Reversible" Locks, when not Beveled, are adapted for use upon any of these Doors.
"Not Reversible" Locks can be used only upon the Doors for which they are made.
When Ordering Not Reversible or Beveled Locks, Specify the Hand Wanted.

Night Latch Assortments.

PRITZLAFF

Mounted.

Per Assortment

Pritzlaff—Containing One Each Nos. 185/J, 185/OC, 24/OC, 86, 100 and 138 Rim Night Latches Mounted on an Attractive Display Board Showing Latches in Actual Position as They Would Appear on the Door, Complete with Screws, Boxes and Directions **$11.00**

The Chicago "Relax" Spring Hinge is fully adapted to the highest class of requirements and is substantially constructed. It has spring power for the most excessive demands, a simple tension adjustment and ball bearings on which the weight of the door is carried.

The spring action is readily released by a small Lever protruding from the Side Plates and is operated by the Foot, allowing the door to be placed open at any desired position. The Spring comes into action automatically when the door is closed.

The "Adjustable Top Pivot" is always furnished with this hinge permitting the door to be readily taken down and allowing full clearance of doorway.

The Chicago "Premier" Spring Hinge is a first quality hinge and a high grade article in every respect.

This hinge holds the door open when it is swung to ninety degrees. The weight of the door is carried on ball bearings, the eccentric is equipped with hardened steel roller bearings, and the piston is made of drop forged steel.

The compression spring is made of the best tempered steel flat wire, producing the greatest efficiency and durability. The tension is adjustable.

The alignment feature is readily accessible at any time and is adjusted by turning a single screw. This eliminates any possibility of improper usage of this feature.

The attaching plate serves as a templet for cutting the door, requiring only the use of a saw and eliminates mortising projecting arms into the edges of the door.

The Chicago "Ajax" Spring Hinge is substantial in construction. It is a very durable hinge.

This hinge holds the door open when it is swung to ninety degrees. The weight of the door is carried on ball bearings which are located at the top of the hinge away from moisture and dirt. The eccentric is equipped with hardened steel roller bearings.

The compression spring is made of the best tempered steel wire and the tension is adjustable. The alignment feature is conveniently located and is both simple and practicable.

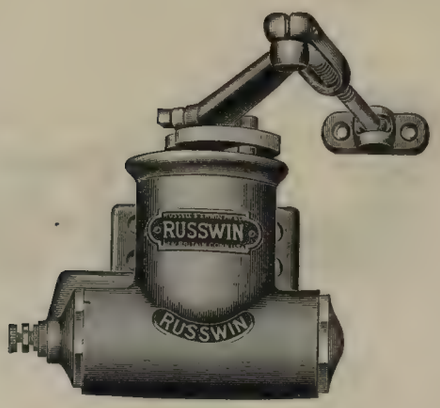
Door Springs and Checks.

RUSSWIN LIQUID, REVERSIBLE



Cut Shows Extra Springs.

Cut Shows Soffit Bracket.

Cut Shows Corner Bracket.

Gold Bronzed.

	Each
No. A—For Screen and Light Inside Doors, Weight Each About 6½ Lbs.	$ 5.20
No. B—For Inside Doors, Not Exceeding 3 ft. Wide, Weight Each About 10 Lbs.	6.80
No. C—For Outside Doors, Not Exceeding 2½ ft. Wide, Weight Each About 13 Lbs.	8.00
No. D—For Outside Doors, Not Exceeding 3 ft. Wide, Weight Each About 17 Lbs.	9.60
No. E—For Heavy Outside Doors and Large Doors Operated Against Very Strong Draughts, Weight Each About 19 Lbs.	12.80

One in a Box, with Screws and Directions.

The Russwin Check can be applied to either a Right or Left Hand Door without reversing either the arm or spring. The Spring employed is of the coil wire type in place of the flat band spring generally in use, and has been tested and proved by fifteen years of car door service.

Note—If the Door is Subject to Strong Draughts, Use One Size Larger than Specified.

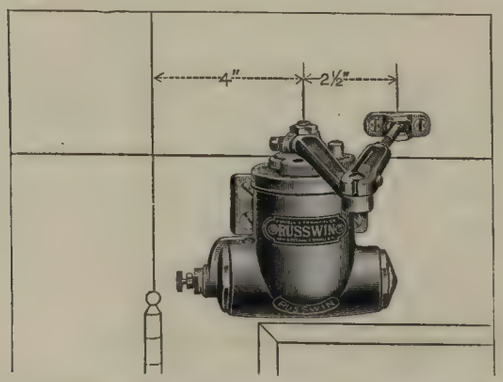


Fig. 1—Right Hand Door from Inside. Use Right Hand Check.

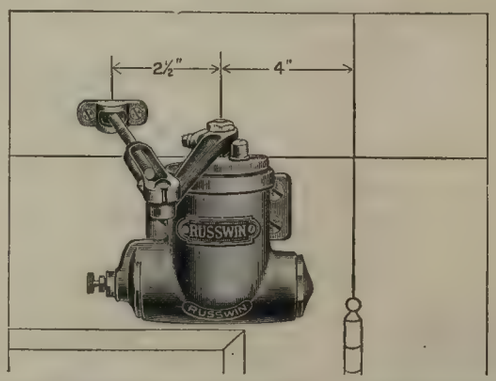

Fig. 2—Left Hand Door from Inside. Use Left Hand Check.

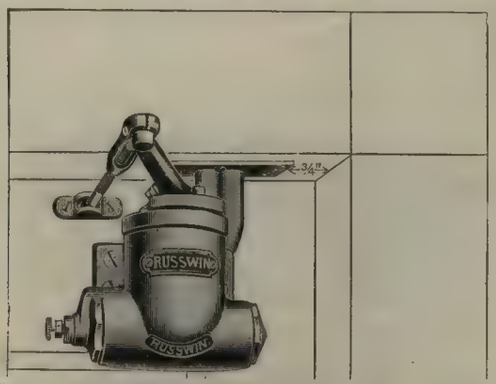

Fig. 3—Right Hand Door from Outside. Use Left Hand Check, Soffit Bracket.

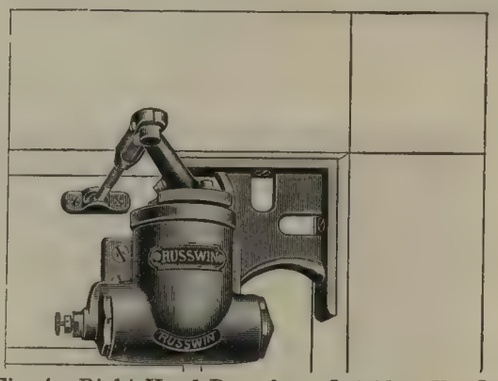

Fig. 4—Right Hand Door from Outside. Use Left Hand Check, Corner Bracket.

No. 6P—For Extra Heavy and Wide Outside Doors, Weight Each About 22 Lbs.	16.00

Pritzlaff's Liquid Door Check and Spring is suitable for either Right or Left Hand Doors by removing top cap and reversing spring. The Spring is adjustable tension, very compact and powerful, and is made from extra heavy clock spring steel of the finest quality. The check can be instantly varied for light or heavy draft by the regulating thumb screw. Door is absolutely under control all the way while closing.

One in a Box, with Screws and Directions.

Note—If the Door is Subject to Strong Draughts Use One Size Larger than Specified.

YALE, DOUBLE ACTING

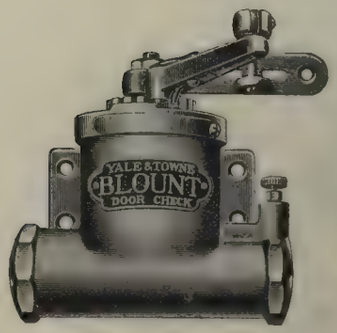
Gold Bronzed.

	Each
No. 53—Yale Double Acting Check Only, for Use on Doors Hung on Double Acting Spring Hinges, Permitting Door to Swing in Both Directions.	$11.25

Weight Each 9 Pounds.

One in a Box.

Blount Holder Checks.



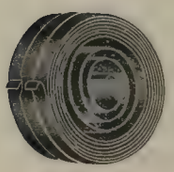
Gold Bronzed.

	Each
No. 101—For Screen and Other Very Light Doors, Weight Each 5 Lbs.	$6.50
No. 102—For Light Inside Doors Not Exceeding 7 ft. High by 3 ft. Wide, Weight Each 7 Lbs.	8.00
No. 103—For Inside Doors of Medium Size, Not Exceeding 7 ft. High by 2½ ft. Wide Weight Each 8 Lbs.	9.20
No. 104—For Heavy Inside Doors and Ordinary Doors, Not Exceeding 7½ ft. by 3 ft. Wide, Weight Each 12 Lbs.	10.80

The Blount Holder Check combines a powerful coil spring (which furnishes the motive power to close the door) and a metallic piston moving in a metallic cylinder against a non-freezing liquid (which furnishes the checking or controlling power).

It looks very much like any Blount Door Check, but it will be noticed that there is a little plug (or latch) which lifts as the door is opened. This Latch catches when the door is pushed back to a given point; this point may be set at will.

One Set in a Box.



EXTRA SPRINGS FOR CORBIN CHECKS

For Corbin 1909 Universal Door Springs and Checks.

For Check Nos.	1	2	3	4	5	6
Each	$0.45	.60	.75	1.00	1.50	1.90

One Set (4 Balances) Complete to Hang One Complete Window (2 Sash), in a Box, with Screws.

When ordering be careful to give Weight, also Height of each Sash, or give Number mentioned above. Side Balances, for Heavier Sash also top Balances, can be furnished to order.

The Caldwell Sash Balance consists of a thoroughly tested steel clock spring coiled within an iron drum, around which is wound a tempered Bronze Tape or Ribbon, which is attached to the Sash, while the resistance of the Spring furnishes the requisite tension or supporting power. The tension of the spring is controlled by means of a brake which is regulated by a screw in the face plate, whereby the balance may easily and conveniently be adjusted at any time to the exact weight of the Sash, and give the latter a steady or uniform motion. The suspending Tape or Ribbon is attached to the Sash by means of Bronze Loop held in place by a screw.

This Balance is especially useful in remodeling old Houses, as it can be easily applied to old Windows without altering the Frame or Sash.

A Half Set consists of 2 Hangers, 1 Floor Guide, Screws for Track and Hangers and 8 ft. of Track.

The "Cushion Track" Parlor Door Hanger is fitted with special noiseless bearings, the tread being turned true to fit track. The shaft is hardened and sound deadening felt compression washers prevent wheel from rattle or side play. The track is especially constructed for this Hanger only. The hard maple rail is thoroughly kiln dried and mounted in a felt cushion supported by metal case. Sound vibrations are thus entirely checked, and the action of the hanger is absolutely noiseless, which is not the case when a wooden rail is used without the cushion. The floor guides are special rubber tired roller guides, making an exceptionally fine hanger combination.

Hangers, One Set in a Box; Track, One Set in a Bundle, with Screws.

Sliding Shutter Sheaves.

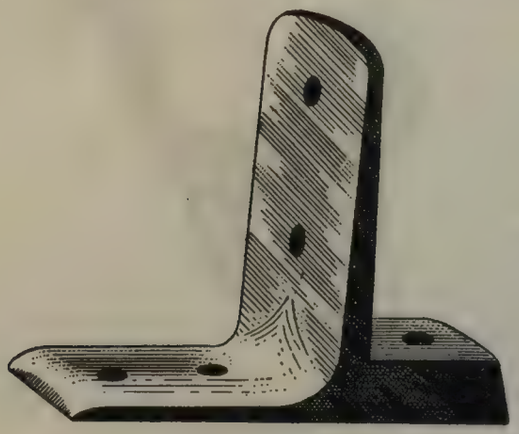
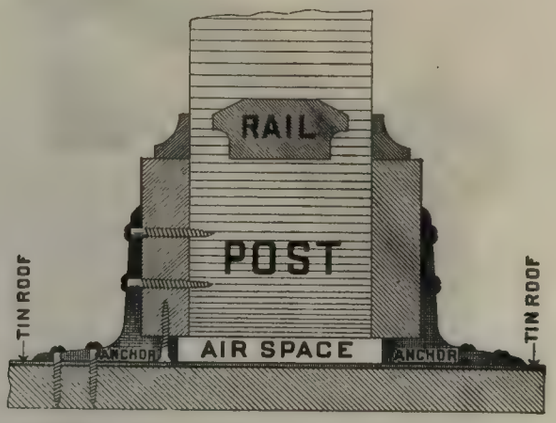
Porch Brackets or Supports.

HAMMAN'S PERFECTION



Cut Full Size.



Showing Bracket Fastened to Tin Roof.

For Fastening Railing Posts to Tin Decks or Any Flat Surface.

	Per Dozen
No. 15—Malleable Iron, Heavily Galvanized, Weight Per Dozen 5 Lbs	**$1.90**

Especially adapted to Pariod, Canvas and Composition Roofs, where soldering is impracticable. Will fit any post, especially columns set on tin decks.

The air space gained by use of Porch Bracket or Anchor allows complete circulation of air between Tin Decks and Posts, which dries out all moisture, thereby preserving the Tin Deck from corroding and the Post from rotting.

One Set in a Box.

The Acme Ball Bearing Casters are made from one piece of sheet steel. The weight imposed falls directly over the center of gravity. There being no lateral strain, consequently there is no possibility of breaking or getting out of order. The surface ball revolves upon a number of small balls that are automatically interchangeable, upon steel disk, and moves in any direction with the slightest pressure.

Gliding Casters.

1	1	12	195	.....	.....

SIMPLEX ROOFING NAILS

Per Pound

Simplex—1 in., No. 12, Barbed, 1 in. Pressed Steel Disc Head .....$.....

The Simplex Nail is in one piece, having the stem riveted on both sides of the head. The head is much thicker than a tin cap, this prevents buckling of the head, leakage, and increases the life of the Nail, as the head will not rust through like a tin cap.

100 Pounds in a Keg.

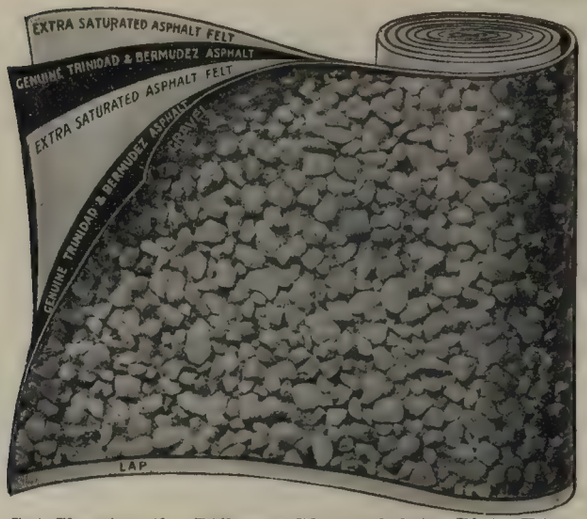
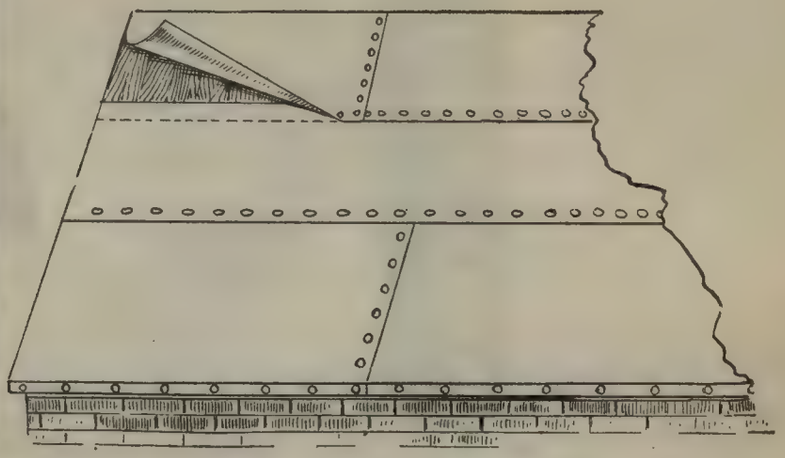
GENASCO STONE SURFACE



Cut Showing the Different Plys and 2 in. Plain Edge which Prevents Leakage at Lap.



Cut Showing Manner of Applying and Lapping.

Complete with Galvanized Nails and Liquid Cement for Laying.

Per Square

Genasco Stone Surface Roofing—32 in. Wide, 108 Square Feet in a Roll, Weight 115 Lbs.....$.....

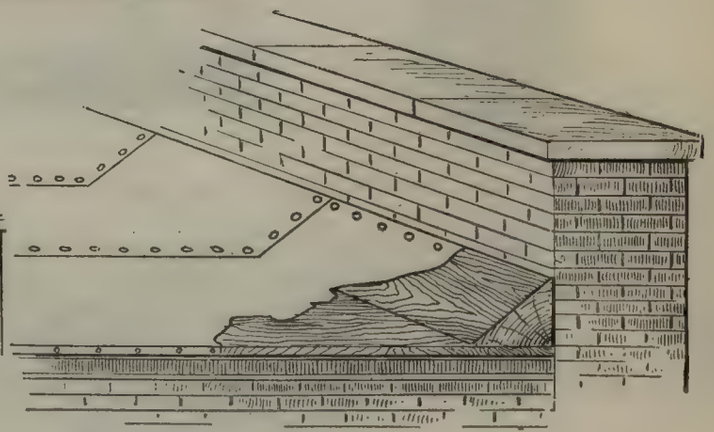
Genasco Stone Surface Ready Roofing is made of two sheets of finest grade wool felt cemented together and coated with specially prepared Trinidad Lake Asphalt. Upon this surface, while it is hot, seashore gravel is rolled. This makes a strong, durable and sensible roofing, and as near fire and acid proof as any ready roofing can be made. It lasts longer than shingles or tin and never requires painting.

All Genasco Brand Ready Roofings are made of Trinidad Lake Asphalt, proven to be the best material to use. It is always pliable or flexible, and is not affected by heat or cold, and will not crack in winter or become soft in summer. Absolutely the highest grade and most durable roofing on the market.

Nails and Liquid Cement for Laying Packed Inside of Each Roll.

GENASCO SMOOTH SURFACE

Cut Showing Manner of Laying.



Cut Showing Manner of Fastening to Side Wall.

Complete with Galvanized Nails and Liquid Cement for Laying.

Per Square

1-Ply—32 in. Wide, 108 Square Feet in a Roll, Weight 35 Lbs.....$.....
2-Ply—32 in. Wide, 108 Square Feet in a Roll, Weight 45 Lbs.....
3-Ply—32 in. Wide, 108 Square Feet in a Roll, Weight 55 Lbs.....

Genasco Smooth Surface Ready Roofing is superior to any so-called Rubber Roofing on the market. It is a slate color, tough and leatherlike material, made from a combination of wool felt and the highest grade of Trinidad Lake Asphalt, not affected by water, acids, alkalies, gases or sudden changes in weather. Flexible, easy to lay, will not dry out and become brittle and break. It does not contain any substitutes for the genuine natural Asphalt.

Nails and Liquid Cement for Laying Packed Inside of Each Roll.

PHOENIX SMOOTH SURFACE

Complete with Bright Nails and Liquid Cement for Laying.

Per Square

1-Ply—32 in. Wide, 108 Square Feet in a Roll, Weight 35 Lbs.....$.....
2-Ply—32 in. Wide, 108 Square Feet in a Roll, Weight 45 Lbs.....
3-Ply—32 in. Wide, 108 Square Feet in a Roll, Weight 55 Lbs.....

A Good Roofing at a Low Price.

Nails and Liquid Cement for Laying Packed Inside of Each Roll.

Prepared Roofing.

Prices on Application.

AMATITE MINERAL SURFACE

ENLARGED SECTIONAL DIAGRAM

Complete with Nails and Liquid Cement for Laying.

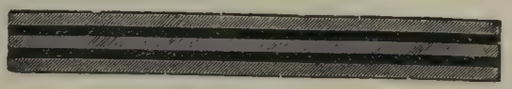
Per Roll

Amatite Mineral Surface Roofing—32 in. Wide, 110 Square Feet in a Roll, Weight Per Roll 100 Lbs.....$.....

Consists of two sheets of thoroughly waterproofed, long fibre wool felt which are solidly cemented together with special run coal tar pitch. The wearing surface is applied at the factory by covering the side to be exposed to the weather with a specially prepared coal tar pitch into which is tightly embedded a uniform and even layer of special non-conductive Amatite surfacing, making painting absolutely unnecessary.

BLACK DIAMOND

Two-Ply.



Three-Ply.

The above Cuts show the Construction of our Two and Three-Ply Black Diamond Roofing Felt.

Per Roll

2-Ply—32 in. Wide, 108 Square Feet in a Roll, Weight 45 Lbs.....$.....
3-Ply—32 in. Wide, 108 Square Feet in a Roll, Weight 70 Lbs.....$.....

Two-Ply consists of two sheets of the best quality Tarred Felt, with one layer of waterproof composition.
Three-Ply consists of three sheets of the best quality Tarred Felt, with two layers of waterproof composition.
It requires 2 gallons of Cement (for two coatings), 1½ pounds Tin Caps and 1 pound Barbed Roofing Nails to lay One Square of Roofing.

Roofing Caps or Discs.

Per Pound

Tin Roofing Caps or Discs—1¼ in. Diameter, without Nails.....$.....

Weight Per Gallon About 12 Pounds.

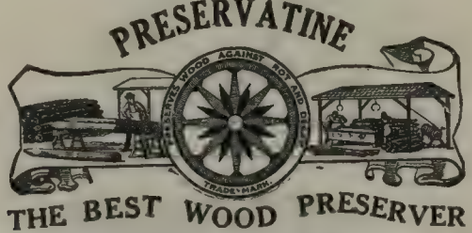
Wood Preserver.



Preservatine, a Disinfecting, Impregnating Fluid which Destroys the Fungus and Other Nitrogeneous Matter Contained in Woodwork.

	Per Gallon
In 1 Gallon Cans (1 Dozen Cans in a Case)	$1.70
In 5 Gallon Cans	1.45
In 10 Gallon Cans	1.35
In Barrel (Containing Between 50 and 60 Gallons)	1.15

Preservatine preserves Wood above or below Ground or Water against rot and decay for at least three times its natural lifetime. It is a penetrating, disinfecting Paint Stain, applied with a brush or by dipping, and gives the wood a Nut Brown Color. Infallible as an exterminator of Chicken Lice and Mites. A good Fly Chaser and Excellent Disinfectant.

Steel Wool.

In 1 Lb. Pkgs.....Per Pound,	1.00	.75	.70	.62

One Dozen 10 Cent Packages or 1 Lb. in a Package.

Steel Wool is a mass of fine fibres of steel resembling curled hair, which, while sharp, do not scratch, but will cut as smoothly as the finest abrasive material heretofore used. It is the best article for rubbing off varnish, shellac, etc., for various uses where sandpaper, pumice stone and other rubbing materials are used, and doing the work quicker.

Each

No. 30—Weighs 30 Lbs. by 1/10ths, Shipping Weight About 3½ Lbs..... **$4.50**

No. 60—Weighs 60 Lbs. by 1/10ths, Shipping Weight About 4 Lbs..... **5.60**

No. 120—Weighs 120 Lbs. by 1/10ths, Shipping Weight About 5 Lbs..... **8.90**

Designed for weighing milk in the pail so as to determine the yield of each cow. The dial has a loose Indicator, which can be adjusted and set by a thumb screw at the 0 mark, so as to balance the weight of the pail. This same Indicator would thus show the net weight of the milk after milking. The pounds are divided by tenths, which makes it much easier to keep the records. One in a Box.

CONFECTIONERY

Sheet Steel Frame, Nickel Plated, Glass Sash, Vertical Dial, Large Distinct Black Figures, Nickeled Rim, Double Upright Post Supports, with Fork, Nickel Plated Brass Scoop 6x11½ in.

Each

No. N650—6 in. Dial, **Weighs 6 Lbs. by ⅛ Oz.**, Size Over All 5½x7x11½ in., Shipping Weight About 4½ Lbs. **$6.70**

Especially adapted for weighing candies, teas, seeds, tobaccos, drugs, etc.

The swivel construction on this Scale enables the operator to turn the Scale within its own length, which is very often desirable.

Timber Work and Foundation for any of the above Scales to be furnished by the purchaser.

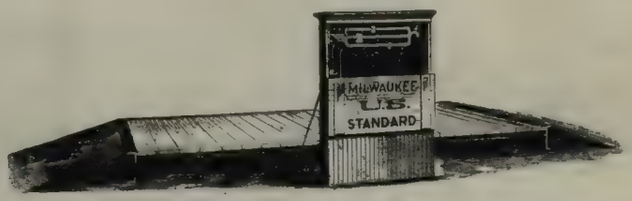
Steel Pitless Wagon Scale.

MILWAUKEE

This Scale is high grade in every particular and has the direct steel lever construction. The internal construction and parts of this Steel Pitless Wagon Scale are made from high grade materials throughout and by skilled mechanics.

The Triple Beam Scale is provided with combination three-bar solid brass beam, carefully graduated to full capacity, thus requiring no loose weights to get lost or out of seal. The upper bar is graduated by 10 pound marks to 2,000 pounds capacity and has brass faced sliding poise provided with set screw so that it can be fastened at any point. The lower bar is graduated to 500 pounds by 2½ pound marks and has brass sliding poise. The middle bar is graduated to balance of capacity of scales by 500 pound notches and is provided with brass-faced sliding poise, fitted with steel pin, which drops in notches. This poise is sealed on each notch thus making any variation in weight impossible. Beams and poises are all finely polished and marks are large and distinct.



Beam pivots are of best tool steel drawn to a knife edge and carefully tempered; each one being secured in beam by hard friction steels which pass through beam preventing the loop from chafing or binding against beam. The beam pivot loops are carefully tempered. The beam is equipped with a balance ball to balance off the weight of the platform as it may vary from accumulation of ice, snow, etc., and also has a counter poise for greater variations in weight.

Our celebrated Steel Pitless Scale is carefully crated and boxed for shipment with complete printed directions for setting up and installing. **Purchaser is required to furnish only the platform planks.**

	Each

Pitless Wagon Scales.

CREAM CITY

The Cream City Pitless Wagon Scale has the same construction as our Milwaukee Scales described above, with the exception that it is furnished without steel channel end sills. Two wood end pieces are used in the place of the steel channel end sills, and are furnished by the customer, the wood end pieces being 8 feet long by 3 inches thick by 10 inches wide. Otherwise the construction is identical with that of the Milwaukee Scale. This Scale is furnished with solid brass beam, carefully graduated to full capacity of scale and provided with brass sliding poises carefully milled to slide freely on weighing bars.

Our Cream City Pitless Wagon Scale is carefully crated and boxed for shipment with complete printed directions for setting up and installing.

	Each
No. 4123D—Double Beam, Capacity 4 Tons, 8x14 ft. Platform, Shipping Weight 900 Lbs.	**$100.00**

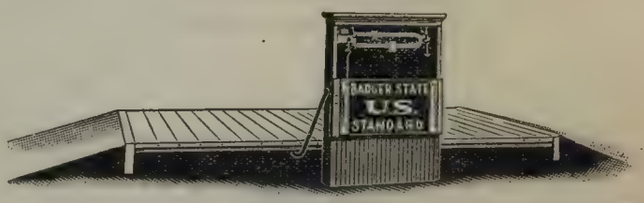
No. 4123T—Triple Beam, Capacity 4 Tons, 8x14 ft. Platform, Shipping Weight 900 Lbs.	**111.10**
No. 5124T—Triple Beam, Capacity 5 Tons, 8x14 ft. Platform, Shipping Weight 900 Lbs.	**122.10**

BADGER STATE



This Pitless Wagon and Stock Scale is provided with full capacity double brass beam fitted with brass poises. This beam is graduated to full capacity of the Scale, there being no loose weights to get lost or out of seal. The upper bar is graduated to 1,000 pounds by 5 pound marks and the lower to 7,000 pounds by 500 pound marks.

The levers are made from T-shaped rolled steel and supported in frame of scale by tubular steel cross pieces, which hold wood end sills in place. The platform stringer next to the beam box is made from a heavy steel I-beam, and supported on levers by carefully chilled bearing feet.

The beam and lever pivots throughout the Scale are of heavy tool steel ground to a knife edge and carefully hardened, thus insuring sensitiveness, accuracy and durability to all parts of Scale where the wear and strain is greatest.

The beam box is made of good materials, well painted and provided with lock and key. The purchaser is required to furnish only the platform planks, two wood end sills 8 feet by 12 inches wide by 3 inches thick, and one platform stringer 14 feet long by 8 inches wide by 6 inches thick, this stringer being placed on the outer end of scale.

The printed instructions show and describe how all wood parts are cut and how foundation should be constructed.

Shipped F. O. B. Factory, Ypsilanti, Mich.

Waste Paper Balers

MERCHANT'S

(Machine Closed Ready to Receive Paper)

IMPORTANT FACTS

The Beam drops back automatically.

The Big Open Top is always ready to receive large armloads and baskets full of waste paper.

The MERCHANTS BALER SERVES AS A PAPER BIN and converts every scrap of paper into commercial form without extra work or loss of time.

There is no loss of space. Every inch is utilized. There is no loss of time feeding bulky paper through a small front door.

The Merchants Baler is guaranteed against breakage. through defect, for one year.

No other Baler, of like capacity, sells for less than $25 to $30.

The screw applies THREE TONS pressure.

The MERCHANTS BALER has divergent sides which allow the bale to drop out of Baler easily.

Baled paper is worth from $6 to $15 a ton.

No. 2 is made like No. 3 and is an excellent baler for stores not having a great amount of waste paper. No. 1 has only two wires.

No. 3 Merchants Baler is the most logical size for general use, owing to the larger capacity, which means a very great saving of time during a year, and we think more than pays for the added cost. With the Baler we will send, free of charge, leaflet entitled "How to Sort Paper," and "Helpful Suggestions," that will aid the user in getting the best results with the Baler.

Wood body, reinforced with Steel Braces at every necessary point; painted red; Japanned iron screw and lever. Furnished complete with 1 hook for handling bales, 1 time-saving tamper and wire for baling 1,000 lbs. of paper.

Challenge Iceberg Refrigerators.

Solid Ash Case, Golden Oak Finish, Matched Lumber Inside Case, Charcoal Sheathing Insulation, Charcoal Filled, Zinc Lined, Removable and Adjustable Woven Wire Sliding Shelves, Swing Base Board, Ball Bearing Casters, Solid Polished Brass Trimmings, Nickel Plated.

Diagram Showing Circulation.

CIRCULATION

The accompanying diagram fully illustrates the theory of circulation in Challenge Iceberg Refrigerators. The arrows indicate the direction of the currents of air, which are kept in constant motion by the opposing forces of heat and cold. These currents are created by the cold air from the ice chamber entering the provision room at the top near its center; from thence it passes down and around whatever articles may be stored therein, taking on their odors and becoming more or less warmed. It is then forced by natural laws to ascend to the top, where its only outlet is through the flues at either side of the ice chamber; here it is condensed and cooled, settling down over and around the ice, which lies upon a rack made of heavy corrugated galvanized iron; when the air comes in contact with this iron, it being as cold as the ice itself, it quickly condenses all vapor or odor that may remain, thus leaving all its impurities to pass off through the drip pipe with the melted ice. The condensation is the same as seen on a pitcher or glass of ice water coming in contact with a warm, moist atmosphere, and is also forcibly illustrated by the breath coming in contact with cold, frosty atmosphere. It will thus be seen that all odor or vapor is removed, and the pure, dry, cold air returns to the provision chamber, thereby securing the most favorable conditions possible for the preservation of all articles stored therein. These conditions will continue so long as the ice chamber is kept filled with ice. Moisture in the provision chamber is a deadly foe, creating foul, poisonous air, and destroys instead of preserving its contents.

The circulation of the Challenge Iceberg keeps the air dry, pure and cold. All these conditions are necessary to insure perfect preserving qualities in a Refrigerator. The Challenge Iceberg Refrigerators are the best made for preserving and keeping all articles stored therein pure and sweet.

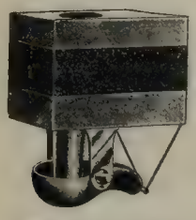
CHARCOAL FILLING

Solid Pure Charcoal Filling has stood the test of time, and it is a well-known fact, familiar to everyone who has taken time to investigate, that it is the best substance known today for the purpose of filling the space between the inside and outside walls of a refrigerator.

It is one of the best known insulators of heat and cold, and possesses purifying qualities which no other filling has. The past years have added convincing proofs of the above facts.

It is also a well-known fact that the space in which filling is deposited should be as nearly air-tight as it is possible to make it in order to produce the best results. A lining of charcoal sheathing, such as we use in the Challenge Iceberg, makes this place practically air-tight. In case a refrigerator leaks, which is frequently the case, caused by carelessness in jamming a hole in the zinc lining, either by putting in ice or chipping it off with an icepick or knife, it should be repaired before becoming thoroughly saturated with water. But please remember that pure charcoal, on account of its purifying and absorbing qualities, never becomes sour or musty by being thus saturated, which is another reason for its being the best filling known.

DRIP CUP



Drip Cup, Closed.

Drip Cup, Opened.

The illustrations above give a very clear idea of the Challenge Iceberg Drip Cup. It is made of iron, and is securely screwed to the case of the Refrigerator, thus preventing it from falling off and letting warm air up into the ice chamber.

It works automatically. A string leading to the front of case can be pulled to empty the cup when emptying the Pan; letting go the string will let the cup back in place and will hold Drip till Pan is put back in place. No water will drip on floor while Pan is being emptied.

Ball Bearing Caster.

CASTERS

The Challenge Iceberg Refrigerator is fitted with Ball Bearing Self-Retaining Casters; made of steel, with wooden wheels, and do not rust the floor.

They will not drop out when Refrigerator is raised from the floor, and are as nearly perfect as a Caster can be made. Can be easily removed if necessary and returned just as easily.

Triumph Refrigerators.

WHITE ENAMELED LINED

Solid Ash Case, Golden Oak Finish, Matched Lumber Inside Wall, Quilted Hair Felt Insulation, Adjustable Sliding Wire Shelves, Swinging Base Board, Solid Brass Trimmings, Nickel Plated Lever Locks, Ball Bearing Casters, Automatic Drip Cup and Trap.

Fig. 1.

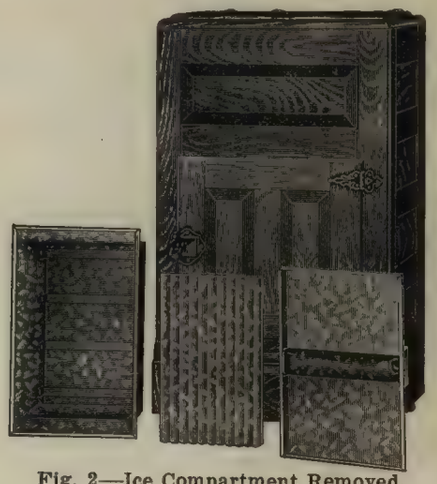

Fig. 2—Ice Compartment Removed.

Fig. 1—Illustration shows the ice receptacle partially removed. The operation of removing the same is very simple. Unscrew the drip pipe, lift out the ice holder, lift out the drip pan, and every part is accessible for cleaning. No wooden backing to ice receptacle to prevent condensation. No pans to attach by means of hooks or slides that are an endless source of trouble and annoyance. This is the simplest, most durable and strongest construction of a removable ice compartment now on the market.

Fig. 2—Illustrates all there is to the removable ice compartment. It consists of the ice receptacle with corrugated ice rack on the left and drip pan on the right. They are simple in construction and cannot get out of order. The circulation is not retarded and the result is a cold, dry atmosphere. Every part of the refrigerator is easy of access for cleaning. The ice man can, if you wish, take the ice receptacle outside, fit the piece to it and carry all into the house as you would a basket and place it in the refrigerator.

WHITE ENAMEL LINING

The Enamel is specially prepared and put on by dipping and baking two coats under high temperature, which expels all odor and makes the enamel perfectly dry and hard. This enamel can be cleaned with a sponge, dampened with water, and using a pure soap, there will be no danger of destroying or damaging the enamel.

NEW INSULATION

This line has an insulator new in refrigerator construction. It is made by quilting and sewing hair between two thicknesses of best insulating paper. The hair used is the same as is used in hair felt. This insulator cannot settle, is odorless, vermin proof, light and permanent. It combines all the qualities of air space sheathing paper and insulators that are filled into the walls of refrigerators.

REMOVABLE ICE TANK

Is made of galvanized iron, with turned edges and riveted joints. It has a center cold air discharge, the ends form complete flues, which insures perfect circulation. The construction gives 20 per cent more ice capacity than others, and will show from four to six degrees lower temperature in 30 minutes.

These inventions give 25 per cent dryer air by Hygrometer test than others can show. The ice pick does not damage the ice receptacle even if holes are knocked into it. **A strictly cleanable Refrigerator.**

DRIP PAN

The Drip Pan, being felt insulated, is a new invention and the only one that will not condense. It is double throughout and has all turned edges.

DRIP PIPE

The Drip Pipe is removable with screw air tight joint, the best one made.

CASTERS

The Casters are self-containing, ball bearing, heavy and strong.

DRIP CUP

The Drip Cup is automatic, cast iron, gravity action.

LID HOLDER

The Lid Holder is automatic.

Triumph Refrigerators.

Victor Refrigerators.

Solid Ash Case, Golden Oak Finish, Matched Lumber Inside Wall, Zinc Lined, Sheathing Insulation, Adjustable and Removable Sliding Wire Shelves, Swinging Base Board, Removable Drip Pipe, Automatic Drip Cup and Trap, Solid Polished Brass Trimmings, Automatic Lid Hinges, Lever Handle Locks, Ball Bearing Casters.

Fig. 1.

Fig. 2—Ice Compartment Removed.

Removable Ice Compartment.

Fig. 1—Illustration shows the ice receptacle partially removed. The operation of removing the same is very simple. Unscrew the drip pipe, lift out the ice holder, lift out the drip pan, and every part is accessible for cleaning. No wooden backing to ice receptacle to prevent condensation. No pans to attach by means of hooks or slides that are an endless source of trouble and annoyance. This is the simplest, most durable and strongest construction of a removable ice compartment refrigerator now on the market.

Fig. 2—Illustrates all there is to the removable ice compartment. It consists of the ice receptacle with corrugated ice rack on the left and the drip pan on the right. They are simple in construction and cannot get out of order. The circulation is not retarded and the result is a cold dry atmosphere. Every part of the refrigerator is easy of access for cleaning. The ice man can, if you wish, take the ice receptacle outside, fit the piece to it and carry all into the house as you would a basket and place it in the refrigerator.

The Removable Ice Tank is made of galvanized iron, with turned edges and riveted joints. It has a center cold air discharge; the ends form complete flues, assuring perfect circulation. This construction gives 20 per cent more ice capacity than others, and will show from four to six degrees lower temperature in thirty minutes.

This invention gives 25 per cent dryer air by Hygrometer test than others can show. The ice pick does not damage the ice receptacle even if holes are knocked into it. A strictly cleanable Refrigerator.

The Shelves are made to slide, leaving space at ends, giving flue circulation no others have.

The Drip Pan, being felt insulated, is a new invention and the only one that will not condense. It is double throughout and has all turned edges.

The Drip Pipe is removable with screw air tight joint, the best one made.

The Casters are self-retaining, ball bearing, heavy and strong.

The Drip Cup is automatic, cast iron, gravity action.

Hardware is solid, heavy brass, nicely polished, brass screws.

Automatic Lid Holder.

Victor Refrigerators.

Solid Ash Case, Golden Oak Finish, Matched Lumber Inside Wall, Zinc Lined, Sheathing Insulation, Adjustable and Removable Sliding Wire Shelves, Swinging Base Board, Removable Drip Pipe, Automatic Drip Cup and Trap, Solid Polished Brass Trimmings, Automatic Lid Hinges, Lever Handle Locks, Ball Bearing Casters.

Grand Refrigerators.

Hardwood Case, Golden Oak Finish, Galvanized Iron Lined, Charcoal Sheathing Insulation, Sliding Adjustable Metal Shelves, Brass Trimmings, Removable Flue, Automatic Drip Cup, Ball Bearing Casters.

The accompanying diagram fully illustrates the theory of circulation in the "Grand" Refrigerators. The arrows indicate the direction of the currents of air, which are kept in constant motion by the opposing forces of heat and cold. These currents are created by the cold air from the ice chamber entering the provision room at the top; from thence it passes down and around whatever articles may be stored therein, taking on their odors and becoming more or less warmed. It is then forced by natural laws to ascend where its only outlet is through the flue at the side of the ice chamber; here it is condensed and cooled, settling down over and around the ice which lies upon a rack made of heavy, corrugated, galvanized iron; when the air comes in contact with this iron, it being as cool as the ice itself, it quickly condenses all vapors or odors that remain, thus leaving all its impurities to pass off through the drip pipe with the melted ice.

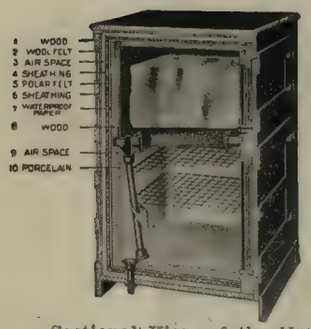
"Glacier Sanitary" Porcelain Lined Refrigerators.

Solid Oak Case, Quarter Sawed Oak Front Panels, Heavy Round Corners, Golden Oak Finish, Rubbed and Polished, Cocoa Fibre Insulation, Genuine Porcelain Lined One-Piece Provision Chamber, Galvanized Iron Lined Ice Chamber, Twelve Walls, Removable Tinned Wire Shelves, Removable Ice Rack, Flues and Drain Pipe, Nickel Plated Trimmings, Genuine Porcelain Lined.

CIRCULATION



Sectional View of the Upright Refrigerator with Removable Flues for Cleaning.

The operation of Refrigerators is illustrated by the sectional view. Ice being placed on the false bottom in the upper compartment, the air under the false bottom becomes very cold and heavy and falls through the opening into the provision chamber below, forcing the warmest air up through the flues at the ends, where it strikes the ice and is condensed and cooled. All the impurities and odors from the food below are taken out of the air as it passes over the ice and under the false bottom to continue its circuit through the provision chamber as before. The circulation is kept up as long as there is ice in the box, and results in a constant current of pure, cold, dry air, passing through the food and preserving it.

It is very important that the air in the provision chamber should be **dry**, or mould and slime will settle on the food and destroy its delicate flavor. Our Refrigerators will keep crackers and ginger snaps crisp and dry. **The Dry Air** is especially important in preserving meat and food for the table. The flues are removable so the inside walls can be easily kept clean.

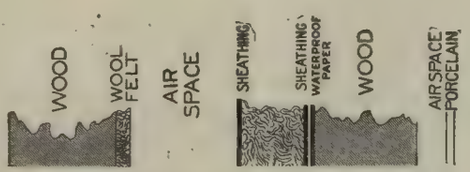
The case and insulation can never become wet or moldy because the Glacier Sanitary is equipped with a patent device for returning water to the trap in case of accidental leakage.

All refrigerator cases have smooth so-called "Table Tops," just as carefully and perfectly made as the most beautiful and expensive fancy or dining room tables. The edges of the boards are so closely united that it is almost impossible to find the lines of union, and the finish is as beautiful as that of expensive furniture.

INSULATION

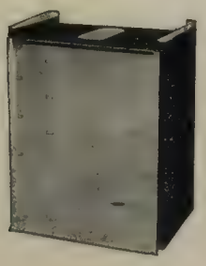
Cocoa Fibre possesses the greatest amount of insulating efficiency of any material ever used or tested for this purpose. It is a blanket held in place between two layers of insulating sheathing by stitching right through the paper and the Cocoa Fibre every six inches. It is then wrapped around the inside box and held there by wooden strips nailed through the felt tightly to the inside box. It can never settle down, as with mineral wool, or as charcoal filling does, but always remains in place, keeping the heat out and the cold in the Refrigerator in the most satisfactory manner.

You will observe that there is an extra air space next to the one-piece porcelain lining. This makes an absolutely dead air space between two surfaces, thus applying the principle of the Thermos bottle. The lining is air tight. The ten insulating walls on the outside of the air space make it practically air tight so that there is a great saving of ice.

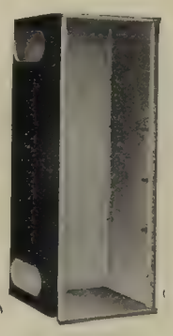


Full Sized Sectional View of One Wall of a Glacier Sanitary Refrigerator.

PORCELAIN LINING



The New One-Piece Porcelain Linings as Used in Over-Head Icing Refrigerators.



The New One-Piece Porcelain Linings as Used in Side Icing Refrigerators.

Each compartment is **all one piece.** The corners are rounded to facilitate cleaning. The compartments are connected by an Air-Tight Joint Cover, also rounded and easy to clean. The shelf supports are fastened from the outside, and they close up the holes so there is not a place for germs to hide.

When the linings are placed in the Refrigerator, they are spaced away from the inside box, making one more dead air space, thus increasing the insulation and giving a lower temperature with less consumption of ice than ever before.

"Glacier Sanitary" Porcelain Lined Refrigerators.

HOTEL AND CONFECTIONERS'

With Fly Wheel.

Especially Adapted for Hotels, Cafes, Ice Cream Parlors, Etc. Triple Motion, White Pine Tubs, Tinned Inside Parts, Galvanized Outside Parts, Duplex Malleable Iron Dasher, Double Self-Adjusting Scraper, Best Charcoal Tinplate Can, Improved Covered Gearing.

Quarts	10	12	15	20	25
Weight Each, Lbs.	45	74	80	97	125
Each	$13.50	18.00	20.60	25.80	32.90

The Can of the White Mountain Freezer moves from right to left, the outside beater moves from left to right, scrapes with its wooden bars the frozen cream from the can and throws it towards the center, where it is met by the floats of the inside beater moving in an opposite direction and returned to the inside surface of the can to be refrozen. The triple motion thus induced keeps the cream constantly moving and ensures every particle being smoothly and evenly frozen.

Ice Cream Freezers.

NEW PLATFORM **WHITE MOUNTAIN** **SAMSON POWER**

Triple Motion.

Galvanized Cast Iron Platform, Stand and Frame, Possesses all the Features of the Famous White Mountain Freezers.

½ Gallon Size, Weight Per Dozen About 62 Lbs.	**26.65**
1 Gallon Size, Weight Per Dozen About 115 Lbs.	**44.50**

One-half Dozen in a Case.

O-Cedar Polish is a vegetable compound for cleaning and polishing all painted, varnished and finished floors, giving a high, hard, durable lustre and finish. The composition of O-Cedar Polish insures a very desirable finish on woodwork instead of the ordinary gummy surface resulting from certain mineral oils. O-Cedar being a vegetable compound is therefore not inflammable.

O-Cedar Duster Cloths.

Chemically Treated Cloth.

	Per Dozen
Small Size, 18x4 in.	**$2.70**

THE DAZEY PRINCIPLE

The **Dazey** Patent Dasher is designed along the lines of the powerful propellers that drive our modern ocean liners, produces an agitation, equalled by no other butter maker.

Any churn will agitate and make butter, but the **Dazey** is the only one that produces butter in its **natural condition.**

In place of breaking the delicate tissues in which the butter fat or oil is contained and bringing this into a mass, the **Dazey** dasher drives the cream across the slanting wings and tenderly rolls up the tiny globules in their natural condition into grains about the size of rice.

During this building up process the caseine and other butter making properties in cream, usually lost with other churns, sticks to and rolls up with the butter globules, which is the reason the **Dazey** makes **more butter.**

The hard uniform size grains during this building up process have squeezed out all the milk, therefore to wash off outside of grains is all that is necessary, which absolutely does away with butter working.

Sanitary—Because nothing to absorb the cream and become rancid as with wooden churns. Can be sunned without warping and without handling entire churn. Just lift the receptacle out.

Cleaning—Is as easily accomplished as cleaning an ordinary tin pail, because there are no cracks or complicated gearings inside. Not a single bearing inside of receptacle.

Temperature—Correct for churning is quickly obtained by placing the receptacle or the whole churn in hot or cold water.

Time—The powerful dasher aided by the square corners of receptacle, produces a scientific agitation, making it possible to churn in from 2 to 5 minutes.

Yield—More butter is produced with the **Dazey** Dasher by rolling all butter making properties up with the butter fat into grains.

Labor—Working of butter is eliminated by the **Dazey**; because the globules in building up in their natural condition have squeezed out all the milk and formed into hard uniform sized grains. To wash off outside of grains is all that is necessary.

ONEIDA JUMP, HIGHEST GRADE

Single Spring, with Chain.

Nos. 0 to 1½.

Per Dozen

No. 0 —**Rat, Gopher or Weasel Trap,** 5¼ in. Long, Spread of Jaws 4 in., Diameter of Pan 1½ in., Length of Chain 16½ in., Weight Per Dozen 5½ Lbs..... **$2.95**

No. 1 —**Muskrat Trap,** 5⅞ in. Long, Spread of Jaws 4¾ in., Diameter of Pan 2⅛ in., Length of Chain 18½ in., Weight Per Dozen 8 Lbs..... **3.20**

No. 1½—**Mink Trap,** 6½ in. Long, Spread of Jaws 5¼ in., Diameter of Pan 2¼ in., Length of Chain 19¾ in., Weight Per Dozen 9½ Lbs..... **4.75**

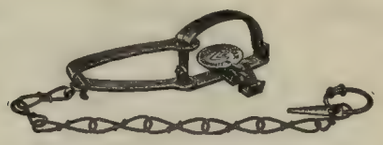
No. 2.

Per Dozen

No. 2—Fox, Raccoon or Fisher Trap, 7¾ in. Long, Spread of Jaws 5½ in., Diameter of Pan 2¾ in., Length of Chain 19¾ in., Weight Per Dozen 14¼ Lbs..... **$6.70**

These Traps are Lighter in Weight and therefore easier to carry than the other style. They lie very flat and are easily secreted in the runways of animals. The Jaws have full, wide meeting faces, much less likely to break the animal's leg.

VICTOR



Single Spring, with Chain.

Per Dozen

No. 0 —**Rat, Gopher or Weasel Trap,** 6⅞ in. Long, Spread of Jaws 3½ in., Diameter of Pan 1½ in., Length of Chain 16½ in., Weight Per Dozen 5 Lbs..... **$2.15**

Coal Chutes.

MAJESTIC

Heavy Steel Body, Best Quality Gray Cast Iron Solid Door, Automatically Locking, All Parts Thoroughly Painted.

With 12 Gauge Boiler Plate Hopper.	Each
No. 101—24 in. Wide, 17 in. high, 13 in. deep, Weight Each 80 Lbs.	$13.35

Without Hopper.	Each
No. 102—24 in. Wide, 17 in. High, 13 in. Deep, Weight Each 66 Lbs.	$10.00

The Majestic Chute is designed to be placed in the foundation wall for depositing coal, wood or vegetables into the cellar. The door can be opened only from the Inside.

Fuel Chutes.

THE "BEST"

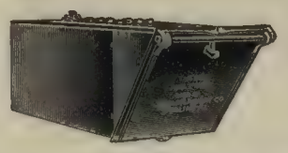

Illustration Shows the Chute Ready for Shipment.

This Chute sets flush with wall on the outside of building and is 28 in. long on top.

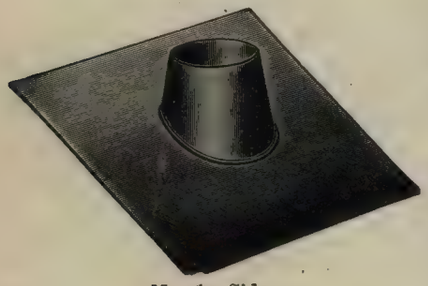
Set in Wall.

Cast Iron Frame and Door, 16 Gauge Steel Tube, with Flange Overlapping Top of Door, Preventing Rain from Running Down the Chute.

	Each
No. 1—18x18 in. Outside, Weight Each 75 Lbs.	$10.00
No. 2—18x24 in. Outside, Weight Each 95 Lbs.	13.00

The cover is held open by the hook on the door engaging with the hook on top of frame. The door opening up protects the siding. When not in use the chain is drawn tight and attached to the hook at bottom of tube which securely locks the door.

Roof Saddles.



No. 1—Side.

Star Side.	Each
No. 1—6 in., Black Sheet Steel, 18x18 in. Flange, Weight Each 1½ Lbs.	$4.00

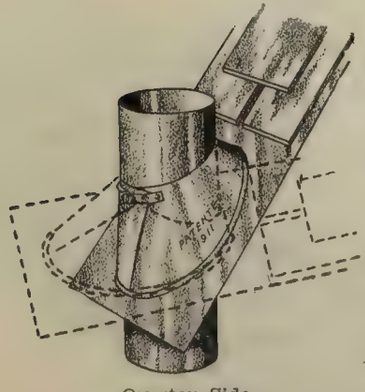
Star Top.	Each
No. 2—6 in., Black Sheet Steel, 18x18 in. Flange, Weight Each 1½ Lbs.	$4.00
No. 4—6 in., Galvanized Iron, 18x18 in. Flange, Weight Each 1½ Lbs.	5.40

One Dozen in a Crate.

No. 4—Top.

Roof Joints.



Overton Side.

Overton, Side.

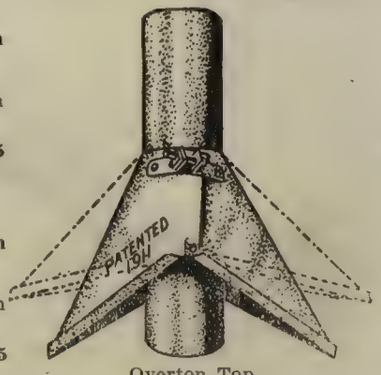
Adjustable, Made of 30 Gauge Galvanized Iron, with Iron Fastening Straps.

	Per Dozen
Overton Side—For 6 in. Pipe, 19¼x13 in., Height of Pipe 3½ in., Weight Per Dozen 18 Lbs.	$7.25

Overton, Top.

Adjustable, Made of 30 Gauge Galvanized Iron, with Iron Fastening Straps.

	Per Dozen
Overton, Top—For 6 in. Pipe, 17x14 in., Weight Per Dozen 18 Lbs.	$7.25

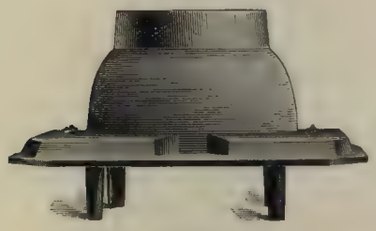


Overton Top.

In the application of the Overton Adjustable Roof Joints to any stove pipe, all that has to be done is to nail it to the roof, no matter what pitch, slip the stove pipe through and after the pipe is placed where it is wanted, tighten the bolt and the work is done. No figuring as to the pitch of the roof; no measuring to find whether or not the pipe is a little over or undersized, for it is adjustable to any pitch and within certain limits to size.

Chimney Caps.

THE BEST



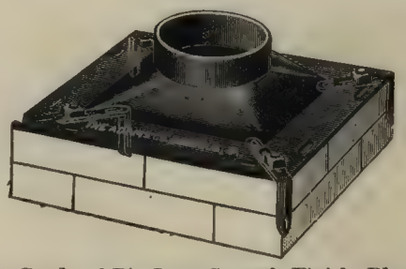
Cast Iron, Adjustable Legs.

	Per Dozen
No. 10—12x14 in. Flange, Takes 7 in. Pipe, for Chimneys with a 4x8 in. or 8x8 in. Flue, Weight Per Dozen 154 Lbs.	$15.60
No. 10½—12x16 in. Flange, Takes 8 in. Pipe, for Chimneys with a 4x8 in., 8x8 in., 4x12 in., or 8x12 in. Flue, Weight Per Dozen 164 Lbs.	19.50

The Legs of this Chimney Cap are adjustable so that each size will fit any chimney up to the largest size for which it is designed. They project inside the chimney to prevent the Cap from blowing off. It is not necessary to use mortar or cement to fasten this Cap to the Chimney as the legs will keep it in place. To put Cap on Chimney adjust the Legs to the size of the Flue and set it on.

One-half Dozen in a Crate.

ADAMS'



Made of Best Grade of Pig Iron, Smooth Finish, Black Japanned, Malleable Iron Clamps.

	Per Dozen
No. 7—12x15 in. Base, Takes 7 in. Pipe, Adjustable to Fit Chimneys with 4x8 in. and 8x8 in. Flue, Weight Per Dozen 146 Lbs.	$18.90
No. 8—12½x16½ in. Base, Takes 8 in. Pipe, Adjustable to Fit Chimneys with 4x8 in. and 8x8 in. Flue, 8x12 in. Flues, Weight Per Dozen 160 Lbs.	20.00

The Clips on the Adams Chimney Cap can be adjusted so they can be set on the Outside of Chimney or Inside of the Flue.

Alcohol Stoves

POCKET

Brass Reservoir, with Folding Tripod.

Per Dozen

No. 5—2 in. Burner, Weight Per Dozen 3 Lbs. **$3.35**

No. 6—3 in. Burner, Weight Per Dozen 5 Lbs. **7.80**

One-twelfth Dozen in a Box.

GLOGAU

Brass Tank Legs and Rack. Nickel Plated.

Per Dozen

No. 15—1¾ in. Diameter Burner, 3¾ in. Diameter of Tank, 4½ in. Diameter of Rack, 4½ in. High Over All, Capacity of Tank 7 Oz., Weight Per Dozen 6 Lbs. **$9.50**

One-twelfth Dozen in a Box.

UNIVERSAL

Brass Alcohol Reservoir and Burner, Steel Legs and Rack, Tin Plated.

Per Dozen

No. 02—3¼ in. Diameter of Burner, 6 in. Diameter of Base, 6¾ in. Diameter of Rack, 4½ in. High Over All, Capacity 1 Pint, Weight Per Dozen 12 Lbs. **$12.25**

One-half Dozen in a Box.

UNIVERSAL

Brass Alcohol Reservoir and Burner, Nickel Plated, Japanese Sheet Steel Body, Substantially Built.

Each

No. 10—10¾ in. Diameter of Grate, 10¾ in. High Over All, Weight Each Boxed 11 Lbs. **$6.70**

Accommodates all regular cooking utensils. Its enclosed body protects the flame from currents of air and makes this stove especially desirable in camps and such places.

One in a Box.

Two Burner Brass Alcohol Reservoir and Burner, Nickel Plated, Japanned Sheet Steel Body, Large Tank, Capacity 2 Quarts.

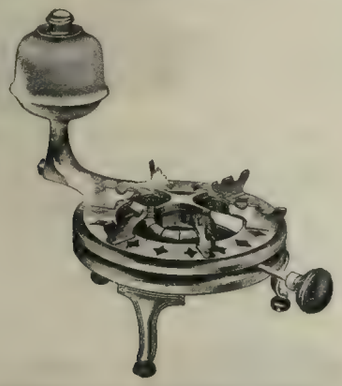
Each

No. 20—21½ in. long, 13¾ in. Wide, 13¼ in. High Over All, Weight Each Boxed 30 Lbs. **$13.35**

It accommodates large size (two burner) bake oven and all regular cooking utensils. It is especially desirable for summer cooking because it insures a cool kitchen, free from the stifling heat of the coal stove—free from foul odors and danger of kerosene or gasoline.

Its enclosed body prevents currents of air from affecting the flame and for this reason it is unequaled for camping outfits, summer cottages, yachts, etc.

One in a Box.



Brass Throughout, Heavily Nickel Plated, Large Tank.

Each

No. 600—8¼ in. Diameter of Grate, 10⅝ in. High Over All, Weight Each Packed 12 Lbs. **$10.85**

Artistic in design, superb in finish and solidly built for service—an ornament to any dining table or sideboard.

For after theater parties, luncheons, impromptu affairs, etc., this stove will be found invaluable.

As serviceable and easily operated as an ordinary gas range—odorless and absolutely safe. Its intensely hot flame insures thorough cooking wherever used.

One in a Box.

Made of Brass Throughout, Heavily Nickel Plated, Large Tank, Equipped with Chafing Dish, Ebonized Wood Handle and Knobs.

Each

No. 660—8¼ in. Diameter of Grate, 10⅝ in. High Over All, Weight Each Packed 16 Lbs. **$21.70**

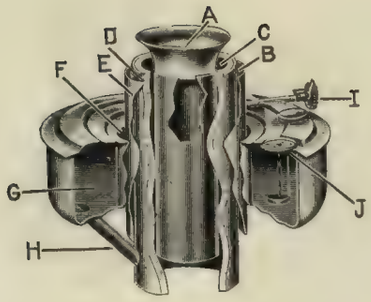
This is the "Universal" Alcohol Gas Stove equipped with a Chafing Dish. It insures the rapid and thorough cooking of a substantial meal, and is safe, efficient, and easily operated as an ordinary gas range.

To its usefulness is added artistic design; solid construction, and handsome finish. It will grace the most elegantly appointed Dining Table.

One in a Box.

Oil Heaters.

ELECTRIC



Construction of the Safety Burner Used in the Electric Heaters.

Absolutely safe. Explosions impossible. No perforations about the Flame Spreader to become clogged with oily substances.

A—Flame Spreader perfectly free from perforations.

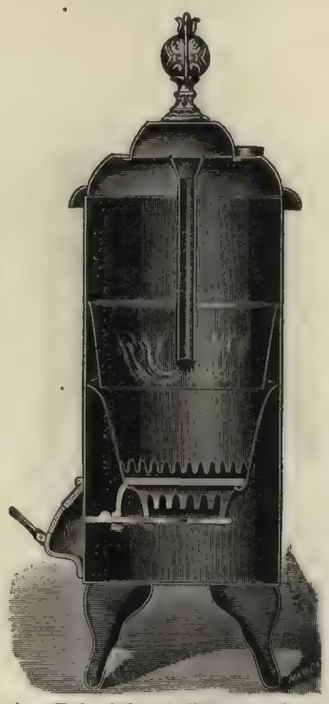
Hot Blast Heaters.

ATLAS

For Hard or Soft Coal.

The smoke consuming hot blast enters through the top of the Stove and passes down the hot pipe, discharging in a highly heated state into the very center of the smoke and gases, consuming them and making them of benefit as fuel. The tube swings out of the way when feeding fuel. The hot blast is regulated by a slide at the top of the tube.

Smooth Steel Body, Heavy Steel Bottom Double Seamed on, Top Central Hot Blast Tube, Top Feed and Check Draft in Smoke Collar, Shaking Draw Center Grate, Nickel Plated Circular Foot Rail, Top Ring and Urn.



Showing Principle of Construction.

One in a Crate.

NEW CENTURY

For Hard or Soft Coal, but Especially Adapted to Meet the Demand for a Heater Burning Soft Coal with the Least Possible Amount of Smoke.

(See Sectional Cut.)

The sectional cut herewith illustrates the principles of operation and construction. The smoke-consuming hot blast enters at two places: first, through front of the Stove below feed door, from whence it passes between highly heated surfaces and is discharged through small jets all around and above the body of the fire; and a second hot blast enters through the top of the Stove, passes down the hot tube and is discharged just above the fire in the very center of the products of combustion. Both blasts, being in a highly heated state, consume all the gases and carbon in the smoke by reason of the increase of oxygen at a high temperature.

Smooth Steel Body, Cast Bottom and Top, Top and FrontFeed, Top and Side Smoke Consuming Hot Blasts, Shaking Draw Center Grate, Large Ashpit and Pan, Check Draft inSmoke Collar, Nickel Plated Foot Rails, Screw Draft, Swing Top Draft Door, Brass Plated Urn.

No. 15—Heavy Gas Engine Oil, a Heavy Red Pennsylvania Viscous Oil with High Fire Test, Suitable for Hot-Running Gasoline Engines Pulling Considerable Power	$0.63
No. 20—Pale Gas Engine Cylinder Oil, a Light Bodied Oil Suitable for Small Gas Engines, Also for Engine or Machinery Lubrication where a fairly Light Bodied Oil is Required, is Highly Filtered, Therefore Suitable for Automobile Lubrication as Well, Leaves Very Little Carbon	.63
No. 25—Red Dynamo and Engine Oil, a Heavy Bodied Red Oil, Suitable for Machine and Engine Lubrication Other than in Cylinders	.45
No. 30—Red Engine Oil, Same as No. 25, but Lighter in Body	.38
No. 35—Machine Castor Oil, Medium or Heavy, a Heavy Manufactured Oil with Gelatin Base, Preferred by Some on Account of its Adhesive Qualities, Used for Farm Machinery, Should Not be Used when Oil Can be Held on the Bearings	.38
No. 40—White Mineral Separator Oil, a White Filtered Mineral Oil, Made to Lubricate Fast Running Light Machinery, Light in Body	$0.45
No. 45—Windmill or Ice Machine Oil, a Pale Oil with a Very Low Cold Test—Lubricating at 7 Below Zero, a Good Engine Oil to Use in Winter, Makes a Fair Winter Automobile Cylinder Oil.	.52
No. 50—Heavy Harvester Oil, a Very Heavy Red Engine Oil, Made to do the Work of Castor, Much Better than Castor in Every Way and Will Lubricate at a Very Low Temperature, Too Heavy for Any Other Purpose	.56
No. 55—Neatsfoot Harness Oil, Dark Color, for Dipping or Rubbing	.78

About 50 Gallons in a Barrel, Prices Quoted Include Cost of Barrel.

	Each
Half Barrel (About 25 Gallons)	$1.70
Ten Gallon Cone Top Jacket Can	1.35

Number of Cans in Case	6	12	24
Per Case	$7.25	8.35	11.15

Automobile Oils.

"NORTHLAND" HIGH GRADE PENNSYLVANIA

Fully Guaranteed.

Nos. 1 and C1 Extra Pale Auto Oil—A highly filtered Pennsylvania Oil with very high fire test and with practically no free carbon. Used most successfully on fast running expensive cars with close fitting bearings. If bearings are not perfectly ground will burn up quickly without residue. Not recommended for the ordinary class of car.

Nos. 2 and C2 Special Oil—The very best filtered, pale Pennsylvania Oil possible to buy at any price, and suitable for any make of water-cooled car. There is no better auto lubricant made regardless of name or price. A better oil cannot be made out of petroleum.

Nos. 3 and C3 Crystalline—A very heavy white oil, especially adapted for motors having the new long stroke engine. It will not smoke and has a low cold test. This is the fanciest oil made. Will lubricate any make of water-cooled or air-cooled motor.

Nos. 4 and C4 Heavy Auto—A strong bodied Pennsylvania filtered oil with very high fire test. For motors needing a heavy oil, also for air-cooled cars. Splendid for motorcycles.

Nos. 6 and C6 Combination—An excellent Pennsylvania filtered oil, with a little stronger body than the **Special,** but not quite so light in color. Contains very little carbon.

Nos. 8 and C8 Bartles Mobiline Auto Oil—This is a medium bodied oil, filtered, and is strongly recommended as a combination oil which a dealer can handle and sell for automobiles, gas engines, power separators, dynamos, ordinary machinery, and medium sized engines. It contains very little free carbon, has good body and high fire test. Its cold test is about 15 above zero.

Nos. 9 and C9 Transmission Oil—A heavy black Pennsylvania Stock oil with a very high fire test. Suitable in the transmissions of automobiles where the bearings are tight enough to hold it. It takes the place of transmission grease and is a very much better lubricant.

In Barrels.

Nos.	1	2	3	4	6	8	9
Per Gallon	$1.25	.78	1.25	.90	.75	.65	.75

NOTE—Kerosene can be shipped by Rail to **Wisconsin Points Only.** Lake Steamers will not accept same. Gasoline can be shipped by Rail only.

Cup and Transmission Grease.

"NORTHLAND," HIGH GRADE

No. 3, Medium; No. 4, Hard.

Greases are made from light oils and should never be used when oil itself can be held. The transmission greases are free flowing and the cup greases are hard. Fibre grease is best used for transmissions and differentials on account of its tendency to cling, also on account of its higher melting point. All our greases are high grade and should not be confused with the cheap greases. They are made from strong bodied oils and compounded with animal oils to maintain their lubricating qualities when melted.

CUP GREASE

	Per Pound

Linseed Oil Soap.

"NORTHLAND," FOR HIGHLY POLISHED SURFACES

A soft neutral soap made to clean highly polished surfaces when mixed with water to the extent of making suds. Cold water should always be used. Will cut all grease and not mar the finest surface. Used almost without exception by all parties cleaning automobiles. Also used for all kinds of general cleaning on account of its properties and on account of its purity.

	Per Pound
In Wooden Barrels, Containing About 430 Lbs	**$0.11**
In Wooden Half Barrels, Containing About 220 Lbs	**.12**
	Per Pail
In Wooden Pails, Containing 33 Lbs. Net	**$5.90**

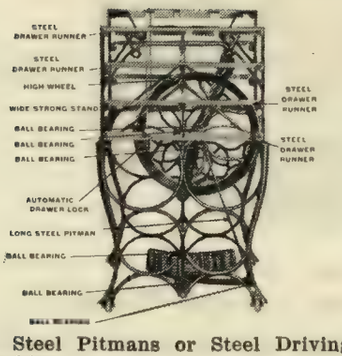
Sewing Machines.

PRITZLAFF Nos. 111 and 222

Of High Character and with Startling Improvements.

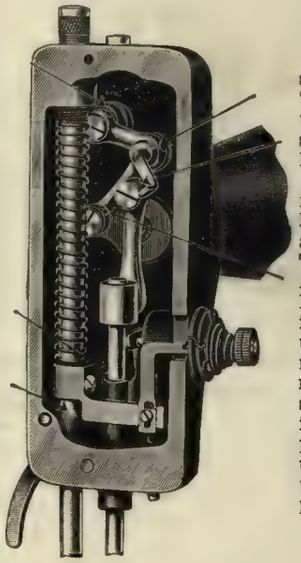
FRENCH LEG DESIGN STAND



The Stand on the Nos. 111 and 222 Pritzlaff Machines are of the French Leg Design, beautiful in appearance, and as wide at the top as at the bottom. Are of strong construction, breakage practically eliminated.

The Wooden Drawer Racks are also eliminated. The Drawers slide on Steel Runners. Steel Pitmans or Steel Driving Rods are used in these Machines.

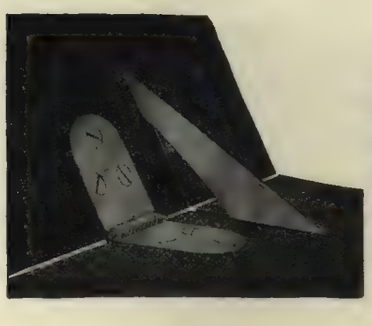
PRITZLAFF Nos. 111 and 222 HEAD



The illustration of the Head shows the Rotary Toggle Link Take-up, the Short Needle Bar, the Short Needle, the Side Tension, the Automatic Tension Release, etc.

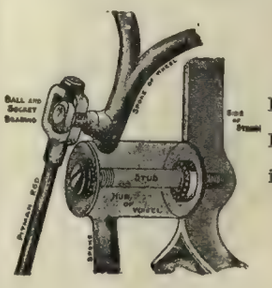
The Head is large and roomy, fitted with Square Four-Motion Feed and with all the up-to-date appliances such as the Automatic Tension Release, Disc Tension, Automatic Bobbin Winder. Large Easily Threaded Shuttle containing a large Bobbin, together with the Link Take-up gives a perfect mechanical and correct movement, making the machine run light and silently and controlling the thread in such a manner as to produce a perfect stitch. The movement of the Take-up is entirely rotary so that friction wear and noise are practically eliminated.

STEEL BAR AUTOMATIC LIFT



This machine is equipped with Dandy Automatic Lift. All that appears above the Table is a Short Steel Blade, 2 inches long. Simple and indestructible. This Lift always brings the Head Frame up flush with the Table.

BALL BEARINGS



In our Ball Bearing Devices, each Ball Bearing is set separately in a Ball Retainer so that the Ball Bearings are indestructible.

NO KEYS REQUIRED BECAUSE OF AUTOMATIC LOCKS

The Pritzlaff Nos. 111 and 222 Machines are equipped with Automatic Locking Devices so that when Head is lifted the drawers unlock automatically and when the Head is lowered lock automatically.

WOODWORK

The Woodwork throughout is built especially with a view to strength and long life and is especially selected for Quality and Material.

HIGH BALANCE WHEEL

This Wheel is hung considerably higher than on other machines. It affords a longer and more direct drive for the Pitman and makes the machine lighter running.

ATTACHMENTS

Each Machine is equipped with a complete set of Steel Attachments, consisting of One Tucker, One Quilter, One Ruffler, One Braider Foot, One Braider Plate, One Shirring Plate, One Binder, Four Hemmers and One Hemmer Foot.

Automatic Drop Head.

Hand Polished Quarter Sawed Oak, Mission Style.

Each

No. 500—Six Drawers, 18 in. Tape Line Inlaid in Front of Table, Complete with All Attachments $49.00

Features of Unusual Merit Embodied in the Pritzlaff Rotary.

Automatic Tension, which adjusts itself instantaneously, without changing, to any size thread and to any kind of material—from the lightest chiffon to the heaviest woolen.

It is absolutely impossible to clog the Improved Pritzlaff Rotary, no matter how adverse the conditions may be. The Bobbin Case is easily and readily removed.

Convenience in Oiling—In the Improved Pritzlaff Rotary we have reached the long desired goal of oiling all working parts from above. It is, therefore, unnecessary for the user to go to the trouble of turning back the sewing head when oiling.

Roller Bearing Spool Pins—The Improved Pritzlaff Rotary has two spool pins with roller bearings at the bottom to prevent thread from snarling and breaking off while sewing at high speed. The spool pin used in winding bobbins is fitted with a guard at the top so it is impossible for the spool to "jump" the pin.

Improved Presser Foot—This is so constructed that it will feed over the thickest seams with ease, and at the same time it will not pucker or mar the finest silk or chiffon.

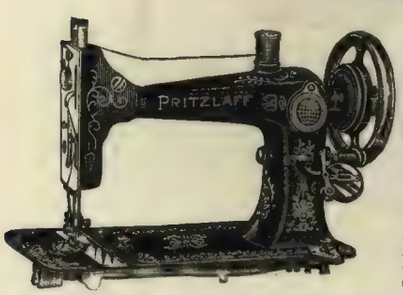
Speed—The Improved Pritzlaff Rotary is geared to produce four and one-half stitches to each revolution of the belt wheel. It is much faster than vibrating machines and is no slower than any other machine of its type.

The general equipment of the Improved Pritzlaff Rotary is of the very finest and is quite in keeping with the high standard of excellence characterizing the sewing head. The cabinet work is attractive in design, handsome in appearance, and superior in construction and finish. The attachments are the highest quality Greist—their efficiency and quality have never been questioned. The ball bearing stand is attractively designed, strongly constructed, easy and quiet in operation.

One in a Crate.

Weight Each About 150 Pounds.

PRITZLAFF, BALL BEARING, THE HIGHEST GRADE



Upper View of Pritzlaff (Vibrator) Head.

Warranted for Ten Years.

This machine has an extra high arm, allowing ample room underneath for handling heavy materials. It is well finished in black baking enamel with imported decalcomania decorations and makes the reliable, time tested, double lock stitch. The improvements are many, including the Self-Regulating Tension with Automatic Release; Gear Releasing Device; Automatic Bobbin Winder; Steel Capped Needle Bar; Double Width Steel Forged, Four Motion Feed; Self-Threading Shuttle; Self-Setting Needle, and Automatic Stitch Regulator. All working parts are made of the finest quality steel, and will last a lifetime.

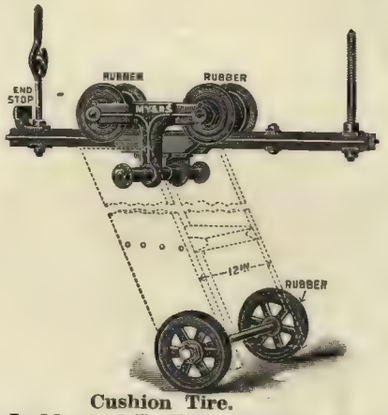
MYERS' TROLLEY



Cushion Tire. **Each**

No. 100—Myers' Ladder and Trolley, Complete, Ready to Put Up, Average Weight, Crated, 60 Lbs. **$22.25**

Track for Above Ladders. **Per Foot**

Track—For Myers' Ladders, Complete with Hangers **$0.34**

Description.

The Ladder is constructed of the best clear Georgia Pine, nicely finished, filled and varnished; has open panel sides, 5 inches wide, with 5 inch steps. Each step is supported at each end with special malleable dowel tee, which makes the strongest construction possible. The width of the ladder is 12 inches.

The Trolley is self-adjusting and made of malleable iron fitted with turned steel bearings and 3 inch anti-rattler wheels, turned and bored on lathe and fitted with **rubber tires.**

The Track is double angle steel rail, which is very neat and strong, and is suspended from ceiling by means of lag screws, either jointed or rigid or by flanged plates and wood screws. By this means the track is placed close to the ceiling and can be leveled on an uneven ceiling without the least trouble and without any blocking or bridging, as is the case in many other tracks.

The Floor Travelers are 5 inches in diameter, composed of metal sides with **rubber cushion tires** clamped in such a position as to be impossible to get off or come loose. These wheels are placed on a steel axle which revolves with one of the wheels, the other running loose. In this manner the ladder will adjust itself to the floor. With this style trolley **which is noiseless,** a great objection in other ladders is overcome.

When the ladder is not the proper length for ceiling, cut off at the bottom and replace the lower traveler shaft by boring new holes at the proper point so as to have the steps of the ladder level.

DIRECTIONS FOR ORDERING STORE LADDERS

Give the exact Height of Ceiling and the Length of Each Track, and the Fitting will be done at the Factory. If the Height of the Ceiling varies give the Height of Ceiling at Each End and Center of Each Run of Track.

Combination Fixture. Each

No. 126—7½ ft High, 25 ft. 3⅛ in. Long, Approximate Shipping Weight 3207 Lbs.....**$607.20**

The above illustration shows a continuous arrangement of fixtures, comprising **three Cabinets**, Nos. 130, 145 and 100; **two Cabinet End Panels**, No. 20; **three Bases**, Nos. 245, 245 and 225; and **two Base End Panels**, No. 20. An unlimited number of combinations can be worked out to the wants of any merchant.

SECTIONAL WALL SHELVING

All exposed parts are of Select White Oak, finished in Medium Oak Waxed Finish. Shelves and interior parts are made of Whitewood. The Base is 32½ in. high, 29¼ in. deep; the Upper Shelving 57½ in. high, 16⅜ in. deep, making the combined height of the Shelving and Base 7 ft. 6 in. The width of the Counter Ledge is 30¼ in., making all dimensions of the Shelving correspond exactly with that of a Cabinet and Base, so that the Shelving may be used in connection with them. The Panel Ends are the same as used on a Cabinet and Base and are removable. Shelves adjustable and additional Shelves can be purchased at any time, making the Shelves adaptable for use with the Duluth Standard Patented Steel Shelf Box.

Per Running Foot

Duluth Hardware Store Fixtures.

CABINET WITH DISPLAY DOORS

Complete with drawers 14 in. long, and equipped with sample display doors 2 in. deep, which set in flush with the outside of the cabinets. These doors are constructed of Oak, finished both sides to match the cabinets and each is hung with three 3x3 in. heavy butts, Brush Brass finish and equipped with a substantial combination catch and handle.

The back of each door is constructed of a three ply hardwood veneer panel, the front of which is lined with a good quality of green felt, although red or black can be furnished without extra charge, and the back is finished to match the balance of the Cabinet. These panels are held in place by nickel plated clips and are easily removable so as to facilitate the changing of the displays on the boards. The hardware contained in the drawers back of the door is sampled on the sample boards, making a most attractive display and adding to the general appearance of the fixtures. The drawers which are used in Cabinets equipped with display doors are not furnished with pulls, but instead have finger holes cut in the fronts so that they are easily pulled out, and at the same time saving the space that a pull would take up between the front of the drawer and the back of the door.

	Each
No. 170—Same Style as No. 120 Drawer Cabinet, but Fitted with Four Sample Display Doors Covering only the Sections Fitted with Drawers, Approximate Shipping Weight 500 Lbs.	**$171.00**

Each	$3.45	3.80	4.10

These Tea and Coffee Pots are cast in one piece, and are absolutely without a seam or rivet except the rivet used to connect the lid. The lugs for the handle are cast to the body and can not get loose. Their construction, combined with the durability of Aluminum, makes them practically indestructible and the best in the market.

One in a Box.

Weight Each, Lbs.	8	9¼
Each	$16.50	18.00

One in a Box.

The Universal Percolating Coffee Machine makes Perfect Coffee free from the bitter taste caused by Boiling, and Retaining all the delicious, aromatic fragrance of the Coffee Bean, a healthful, appetizing beverage. In the Universal the action of the Automatic Pump forces the water through the tube, while it is only luke-warm. As the water is gradually heated, the Percolating Process is going on all the time, and the wholesome qualities of the coffee are extracted, and by the time the water has reached the boiling point, which seems necessary, to bring out the flavor and aroma, the Coffee is ready to serve.

There is no escaping steam by this process, as there is in all others, therefore the aroma is not lost. The water reaches the boiling point only at the last stage of the process, while in other machines the water is boiling all the time the process is going on.

Coffee Percolators.

This Stirrer and Sampler is "a simple utensil" that stirs, mixes, agitates thoroughly—and is also a perfect device for taking samples for testing or other purposes.

Open Stock.

Milk Coolers and Aerators.

Saves Ice, Time and Labor, Causes the Complete REMOVAL OF ANIMAL HEAT, thus INSURING MILK THAT WILL NOT SOUR.

Per Dozen
No. 10—5½ in. Diameter at Bottom, 24 in. High, Weight Per Dozen 25 Lbs. **$12.25**

DIRECTIONS.

Push the Aerator into the milk to the bottom of the can, which action causes the pure air contained in the bowl of the Aerator to be forced through its flues into the milk, thus causing a perfect aeration and removal of animal heat. When the bubbling in the milk stops, immediately raise the Aerator entirely out of the milk so that a new charge of air is received and then force it back to the bottom of the can again. Each time you force the Aerator down, fresh air is forced through the milk. Repeat this operation several times, and you will have clean, pure and wholesome milk.

Railroad Milk Cans.

Esaube Loose Leaf Ledger Outfits.

Round Steel Back, Metal Hinges.

The Esaube Ledger is designed to meet the demand for a durable Low Priced Loose Leaf Ledger, in sizes suitable to the requirements of various lines of business.

Construction. The mechanism is made entirely of steel. The frame consists of three pieces of pressed steel. The back is formed round with peculiar ends which form housings for the sliding side members, thus making a frame of great rigidity with minimum weight.

The Mechanism is simple, a center screw shaft securely anchored to the back and operated from the end by a detachable key, controls the expansion thereby tightening or loosening the sheets.

Capacity. 1½ in. back, will hold from 250 to 400 sheets, with Index.

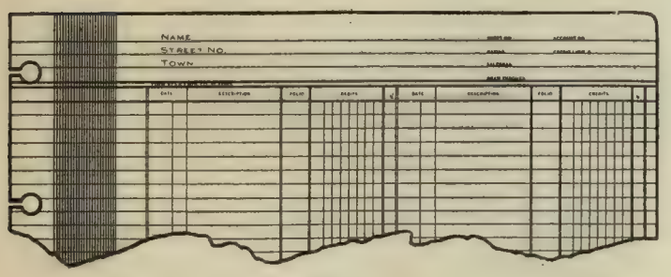
Posts. 4 Alternating Telescope Posts $\frac{5}{16}$ in. Diameter, Standard Centers.

Binding. The Covers are made of double boards, round corners with metal hinges and bound in **Corduroy** with red cowhide back and corners gold tooled.

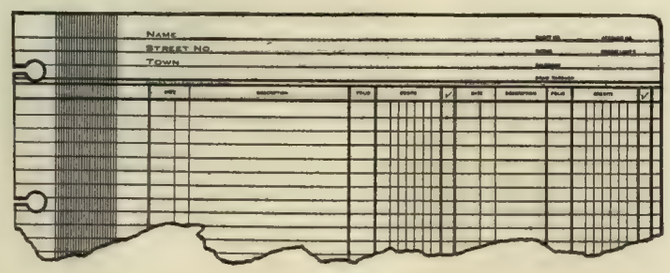
Indexes. The Indexes are of a good grade of Buff Linen Ledger Paper with Leathered Tabs.

Sheets. The Sheets are made of a good grade of Linen Ledger Paper, Two Styles of Ruling, Form A and Form B. (Order by Form Number.)

STYLES OF RULING



Style A.



Style B.

Outfit No. 395.

Size of Sheet 7½x10⅜ inches.

DUPLICATING SCALE BOOKS

Weighers' Scale Books, Weighed on Fairbanks' and Howe Standard Scales.

	Per Dozen
No. 4982—6x12¾ in., 150 Leaves, Standard Form, Four Blanks on a Leaf, Book and Cover Complete with Carbon Paper, Half Bound, Black Cloth Sides, Red Leather Back, Weight Per Dozen 19 Lbs.	**$16.15**

Extra Fillers, Duplicating, for Above Books.

	Per Dozen
No. 4982½—For No. 4982 Books, Complete with Carbon Paper, Weight Per Dozen 14 Lbs.	**$10.00**

The line of Improved Carbon Books listed above possesses a number of advantages. Although well made and of neat appearance, they are low in price. The covers are made separate from the insides or fillers, so that when an order for the books is duplicated, it is necessary to incur the expense of the fillers only. Each filler is complete with carbon paper.

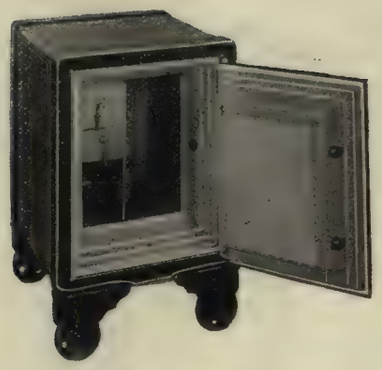
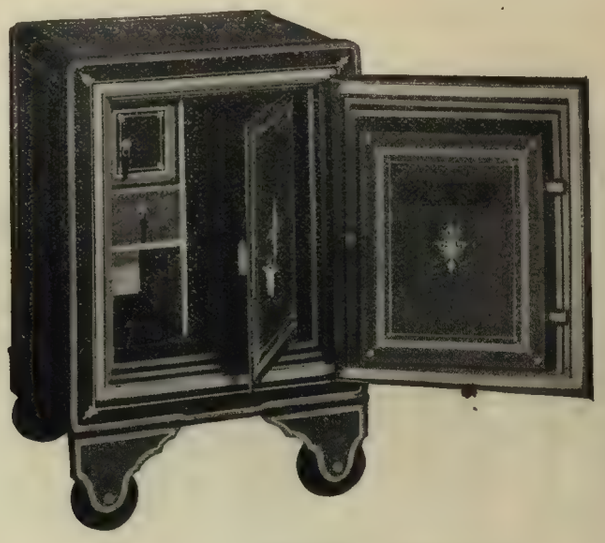
Medium Wall Safes.

NORTHWESTERN SAFE MFG. CO.'S



No. 300.



No. 303.

Construction and Material Used:—The body of these Safes is made of one continuous sheet of Bessemer Steel, forming top, bottom and two sides, being securely riveted at the bottom with heavy Boiler Rivets, Corners and Edges protected with Bars which pass entirely around the body of the Safe, one at the front and one at the back, each formed of one continuous bar of steel welded at each corner (not riveted). The back of the Safe is formed of one sheet of selected Bessemer steel set inside the angle frame. This method of construction eliminates all weak spots, giving the greatest strength and rigidity to the Safe so that it will stand a fall from a considerable height, and prevents it being crushed by walls or heavy timbers falling upon it. A special feature of these Safes is the intersecting flange on the inner edge of the door which fits in behind the angle frame, thus giving a close fit and increasing the efficiency of the Safe in excluding heat and moisture. Heavy outside hinges riveted to the angle frame and door are used; also asbestos packing around the door frame and door.

Fire-Proof Composition:—The Composition is composed of the most effective heat resisting ingredients with cement as a base. It is mixed by experts, is introduced into the walls of the Safe in a semi-liquid state and allowed to harden. The greatest care has to be used in this operation, and the Composition is such that when exposed to heat, owing to its chemical nature, it throws off a vapor which is a non-conductor of heat. After fire-proof composition has gone through this process, it loses its fire-proof qualities. This explains why a second-hand safe that has gone through a fire is of no value so far as fire protection is concerned. The Northwestern Safes have been given actual tests by subjecting them to steady and intense heat for long periods, and in every case the interior of the Safe and its contents have been perfectly preserved.

Operation:—The bolt work is of the special design, simple in construction and never gets out of order. The lock and bolt works are easy of access for oiling and changing the combination if desired. Yale Combination Locks on outside doors and Yale key locks on inside doors, cash box and lock drawers are used. Yale locks are considered the best made, cannot be picked, and operate only on the numbers on which the combination is set. These locks can be set on one, two, three or four number combinations as desired.

Decoration:—These Safes are handsomely finished in Dark Green and Gold Stripes, and we letter your name on if requested without extra charge.

NOTE—No. 64 has Double Outside and Inside Doors.

Vestibule Vault Doors.

FIRE-PROOF

No. 1—Vault Front, Closed.

No. 1—Vault Front, Open.

Standard.

Construction:—Outer door plate formed of $\frac{7}{16}$ in. Bessemer steel, reinforced on sides, top and bottom by 2x2x¼ in. angles, making door $\frac{7}{16}$ in. thick on front edge. Front frame formed of 4x¼ in. Bessemer steel, riveted at bottom to 2¾x⅜ in. sill bar. 1¾x1¾x⅛ in. steel angles are securely riveted to the frame bars forming the step for the door. Sides, top and bottom are formed of No. 16 steel, reinforced at corners by 1¾x1¾x¼ in. angles and fastened to front and rear with 1¾x1¾x¼ in. angles. To the angles 3½x¼ in. removable bars are fastened. The bars are arranged so that they may be removed until the vestibule is set into the wall after which they are replaced to hold the vestibule securely in position. The outer door is hung on two heavy hinges. Doors swing to the right unless otherwise specified.

Bolt Work:—Outer door is locked with six 1 in. round steel bolts, heavily nickel plated, four across, one up and one down, operating through an angle bolt frame. Bolts are checked by Yale Four Tumbler Combination Lock, and thrown by Nickel Plated Drop Handle.

Inside Doors:—Are formed of $\frac{3}{16}$ in. Bessemer steel and fold back into the vestibule. Inside doors locked by up and down flat bolt work, checked by key lock.

Decoration:—Outer and Inner Doors finished in jet black, gold striped. Vestibule painted inside and outside, fern green if desired.

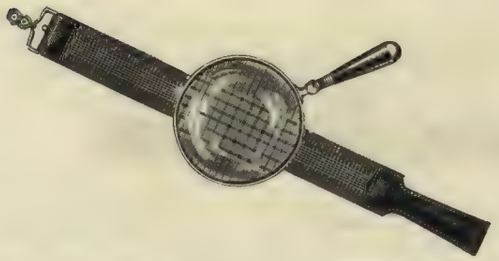
Carborundum Razor Strops.



Showing Corrugations and Carborundum Powder Under Magnifying Glass.

Carborundum Razor Strops are made from the finest of selected horsehide, hand-buffed and finished. The sharpening sides of the strops are corrugated and into the corrugations and into the texture of the leather the finest hand-washed Carborundum Powder is worked.

This feature, which is only found in Carborundum Strops, brings the dullest razor to an edge after but two or three strokes. The strops are fitted with new, novel and practical hardware and will retain their pliability for years.

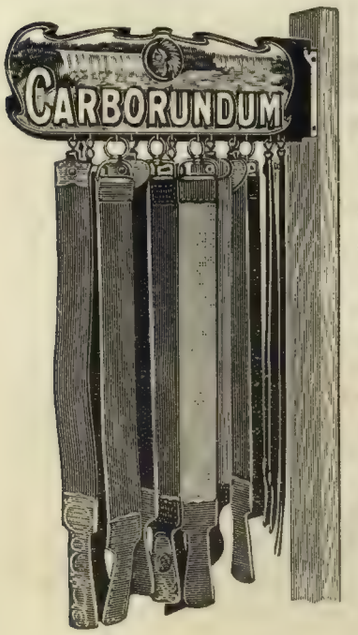
Carborundum Razor Strop Display Hanger.

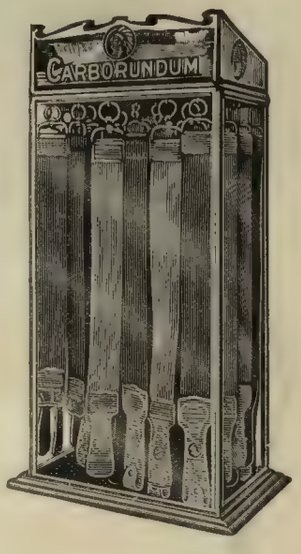


This Hanger consists of a beautiful lithographed steel display panel. The panel is done in eight colors and white, showing a striking view of Niagara Falls and the Indian Head trade-mark of the Carborundum line. The display panel is fitted with a bracket that can be put up in a display window corner, attached to a display case, counter or store wall. At the bottom of the panel are placed a series of hooks to which are hung a dozen Carborundum Razor Strops.

Given free with two dozen razor strops.

Carborundum Razor Strop Display Case.

This Case is 29 inches high, 9¾ inches deep and 15½ inches wide. It has a steel frame, copper oxide finish and heavy glass panels. The interior of the case is fitted with a series of hooks arranged on sliding bars. Strops all hang full length the case is practically dust proof and is a decidedly attractive display. The case will hold six dozen strops.



Given free with six dozen razor strops.

Sheep Shearing Machines.

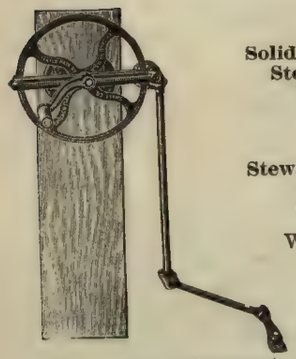
STEWART'S NEW MODEL



Solid Metal Cut Gears, Hardened Tool Steel Wearing Parts, Large Gear Wheel, Universal Jointed Solid Core Shaft.

Each

Stewart's New Model—Complete With 4 Cutters and 4 Combs **$21.25**

Weight Each, Boxed, 60 Pounds.

One in a Box.

This is the strongest and most substantial of all Hand Power Shearing Machines. It is a marvel of simplicity and strength. The face and side of the large gear wheel are turned perfectly true and the teeth are generated in it on automatic machines so as to insure absolute accuracy. This large gear wheel is enclosed in a stationary frame that is solid and substantial. By turning the crank, the larger gear wheel drives a hardened steel cut pinion to which the universal jointed solid core shaft is connected.
